Quad Axle

40 yards (mulch) / 20 yards (soil)

## Coverage

**How much mulch should you purchase?** For most applications, best results are obtained by spreading mulch at a thickness of 2 to 3 inches. To determine how much mulch is needed, measure the area to be covered. Multiply the length (in feet) of the area by the width (in feet) to calculate the square footage. To reach cubic yards needed, divide the square footage by the appropriate ratio below:

162 for 2" thick  
108 for 3" thick  
81 for 4" thick
